The Nikon 105mm f/2.5 AI-s is a manual-focus only lens. Personally I prefer the field of view of an 85mm or the speed of the 105mm f/1.8, but I'm weird. The newer (since 1977) versions of the 105mm f/2.5 have a handy built-in lens hood and they all take the standard 52mm filters.

This manual focus lens outperforms its newer 85mm f/1.4 D autofocus sibling. In fact, its so good that even after the f/1.4 autofocus lens came out, for about the about the same price, Nikon kept making these for 10 more years! It's sharper than the new AF lens, and it has much better bokeh than most other Nikon lenses.

Manual focus lenses are a bit of a mixed bag. With AI-P lenses, you'll get full compatibility, including all the PASM modes available, exactly as you'd like. The reflex lens is a good lens, basically a poor man's 500 mm lens. It is all manual focus and exposure. I usually use it with a Nikon TC-14A to multiply the Nikkor by 1.4 to 700 mm. The reflex 500 mm will never be as good as an AF-S 500 mm f/4.
